

3-0004-EN-Inserting Paragraphs/Products that are linked...

Author:
ShopFactory

Created On: 03 Jun 2013 11:22 PM

In ShopFactory, you can add image links constrained by a column-display productloop style. This is commonly used to feature pages and products on a page or add quick links to a category or a product.

For example, on your homepage, you can feature products or categories that are linked to an exact page in the shop or to an external website -> this can be done by adding paragraphs *with image linked to a page* and then using a column-display product style such as **SFX-PAL**, **SFX-LITE**, **SFX-PIN**

- Open your shop in ShopFactory
- At the left tree menu, select the page you want to add paragraph links -> then right click on it -> Select a "**Product/Paragraph style**" -> choose *SFX-LITE* variation 1 product style for example -> click OK.
- Now, click on "**Add Paragraph**" button from the toolbar above the editor
- Select the image you want to use for your paragraph
- In the product dialog box, locate the image editing toolbar (upper right corner of the dialog) and click on the "Link to another page or website" button
- Select whether you are linking within the shop (**Place in this website**) or externally (*Internet address*)
- If you want to link to a page in this shop, select the page on the left-tree menu and then click OK.

**Repeat above steps for all other paragraph links.*

- Save and preview your shop in external browser
- The output should look something like this, where the paragraph images are actually linked to other pages in the same shop:
