Generally, the tax in ShopFactory is applied to the whole product, not on just a part of it. However, you can set it up by adjusting the tax rate using the ratio of the part of the product.

For example:

What it should be:

For the tax 19% = $45 / 119 * 19 = 7.18$

For the tax 6% = $60 / 106 * 6 = 3.40$

ShopFactory set up:

Tax rate of Tax 19% should be set to $(19 * 45/105) = 8.14$

Tax rate of Tax 6% should be set to $(6 * 60/105) = 3.43$

For the tax 19% = $105 / 119 * 8.14 = 7.18$

For the tax 6% = $105 / 106 * 3.43 = 3.40$

Therefore, you should create 2 new taxes with tax rates of 8.14% and 3.43%, and assign them to the product.
