I obtained my Google Analytics code and I want to add this on my website. How do I do this?

If you are using version 7 of ShopFactory, please ensure you have correctly added the Google analytics code.

You will only need to add the analytics script to one page in your shop's project folder.

» Please go to your shop's project folder (usually located in My Documents/ShopFactory V7 websites) and locate the folder your projectTemplatesWebsiteyourtemplateparseLang and open the file website.html in Notepad.

» Scroll down to the bottom of this file and copy paste the analytics code just before the </body> tag.

» Close the file and save it, open your project, go to Options and select Rebuild All, go to Publish and select Publish All and publish your site.
