Opening of links in a new window or a new tab is a user controlled setting in the browser. It can't be controlled by a web page.

You can actually force Internet Explorer to open the link in a new tab and not in a new window, please follow this procedure:

- open Internet Explorer
- click on Tools and then Internet Options

- Now click on the Settings button under the Tabs section on the General tab

- Under the heading "When a pop-up is encountered", choose Always open pop-ups in a new tab

Now when you click on a link in Internet Explorer that is set to open in a new window, it will instead open in a new tab.
