This Add-On allows you to create and maintain a website in multiple languages. ShopFactory Language Link is a complete language solution for your multilingual website. A must, if you want to boost your international sales. XLIFF support allows you to export website content so you can easily pass it on to translators and then import the translations.

Creating a website in multiple languages will help you to increase your sales.

International Language Link adds the ability to create and maintain a website in multiple languages to ShopFactory Pro, Gold and Developer. It adds a translation interface to ShopFactory , to allow you to add multiple languages and supports exporting and importing of translations using the standardized XLIFF translation format. Leading translation packages such as Trados or Heartsome support the XLIFF format, making it easy to pass the information you want to translate on to a translator.

International LanguageLink also allows you to define which pages and products appear in which language, so that you can have different versions of your website in different languages. A great Add-On to ShopFactory for anyone who wants to maintain a website in multiple languages.
