The error above appears when you generate a PGP key in SalesManager and you already have previously generated a PGP key in that same computer.
  To resolve the issue you need to delete the existing PGP key in that computer by deleting folder named ' 3dPGP' that can be found inside the Application data folder, please see procedure below on how to delete the 3dPGP folder:
  - Close SalesManager - Click Start menu - Open Run or command prompt - Type in **%appdata%** - Press enter
  - The Application data folder will open - You should find the folder **3dPGP** and you can now delete it
   After deleting the 3dPGP folder you can now regenerate the new PGP code and re-setup payment methods accepted in your shop.
