If you want to offer 3 or more products for \$9.95 you need to setup discounts in the following way:
1. Add a Product to your Shop for \$5.95 2. Click on Your Product and then Chose Product Discounts from the menu 3. setup as below 4. That means at checkout if customers buy 1 it costs \$5.95, if they buy 2 it costs them \$5.95 x 2, if they buy three it costs them \$3.31 each so the total is \$9.93 **Note:** If you want this to appear as \$9.95 not \$9.93 you simply need to change your rounding options in the Settings -> Global Settings dialog:

5. Now if you want to achieve the following:- Buy 3 get them for \$9.95 but Buy 4 $3 \times \$3.31 = 9.95$ plus 1 x \$5.95 buy 5 $3 \times \$3.31 = 9.95$ plus 2x \$5.95 buy 6 $6 \times 3.31 = \$9.90$ *You can achieve this by doing the following:*

You will need to "play around" with the pricing to achieve the exact price points you want, this is just an example.
