Important: You must "use old embed code" from YouTube

- Open YouTube and locate the video or you can use the direct youtube link, i.e. http://www.youtube.com/watch?v=6VV3_6h4jbl
 - Click the SHARE button and select EMBED tab
 - Tick “**Use old embed code**” when copying the code
- The old embed code from Youtube must be used - copy the entire code
- A) Use Youtube videos as page image

To use a Youtube video as page image, please follow the steps below:

- Open shop in ShopFactory
- In Normal view, open the page where you want to show video as page image
- Right-click the page in the tree menu and select Page Properties
- Click on the Youtube icon
- Paste the embed HTML code in the textarea and click OK twice

B) Adding videos to the Page Introduction and/or description area

The procedure below is for Page Introduction area, but it works the same with the page description.

- Open shop in ShopFactory
- In Normal view, open the page where you want to add the videos
- Right-click the page in the tree menu and select Page Properties
- The page properties will open, click on the HTML code button
- Insert the embed HTML code in the textarea
- Click the HTML button again
- Click Ok

The video is now embedded.

C) Adding videos inside a table cell

Please follow the steps below on how to insert videos inside a table cell:

- Open shop in ShopFactory
- In Normal view, open the page where the table is located

- Right-click on the table cell
- Select "Embed from video sharing site";
- Insert the embed HTML code in the textarea
- Click Ok

The video should appear now.

D) Embed mp4 video

Copy the mp4 to your **<shop project folder>Runtimemedia** folder.

- Add this to custom html code or html view of a description field. Adjust the filename and dimensions accordingly:

```
<video width="320" height="240" controls>  
  <source src="../../media/movie.mp4" type="video/mp4">  
  Your browser does not support the video tag.  
</video>
```

Where, *movie.mp4* is the actual filename of your mp4 video. You must change the html code to have the correct mp4 filename.
