List Mode

List mode gives you a tabular overview over the paragraphs and products on a page. You can edit all paragraphs in List view.

To change the columns shown in List view, click on the View menu and select "View List Settings …". Just put a tick next to the field you want to appear in the dialog coming up. To edit a field in List view, click on the field to select it, then click on it again to edit its content.

Tabular Editing

In ShopFactory List mode you can quickly edit prices by moving from field to field with the Tab key and up and down with the arrow buttons on your keyboard. Click on any field to select it, then click on it again to enter editing mode. Once you have changed a price you can click the Up or Down Keys on your keyboard to change the next price.

Functions with this icon are available in Professional versions or above.

Customize Design Mode

This mode allows you to quickly customize your website with point and click ease. You can change the Website theme, colors, fonts and so on.

Preview Mode

In preview mode you can see the final look of your website and of the page you are working on, as it will be shown to your customer.

You can change the Website Theme in Preview mode – to see how your website will look like in a different Theme.
